

ABHI GUPTA

AI SYSTEMS TECHNICAL LEADER & ARCHITECT | ENTERPRISE AND PRODUCT AI

Stockholm, Sweden · +46 761 458 236 · abhi07gupta@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFILE

Stockholm-based Lead AI Engineer with 18 years in technology and 13+ years across analytics, data science, ML, and AI. I design accountable AI systems for enterprise workflows and product experiences across architecture, semantic context, trustworthy agentic patterns, production engineering, evaluation, and adoption. My public projects contain runnable, synthetic examples of the decision and control patterns I use.

FOCUS

Enterprise and Product AI architecture · Agentic AI · semantic context · knowledge graphs · production ML/GenAI · product integration · evaluation and trust · technical leadership · mentoring · adoption

EXPERIENCE

Lead AI Engineer | Global telecommunications technology organization

Mar 2026-Present | Sweden

- Defined a domain-neutral semantic-context architecture spanning input processing, ontology, validation, persistence, and controlled evolution across use cases.
- Made trust an architectural concern through staged validation, critic/evidence checks, explicit human decisions, and recoverable boundaries.
- Aligned six senior stakeholder groups on common context, interfaces, and next-phase direction while guiding four engineers through technical implementation.

Lead Data Scientist | Global telecommunications technology organization

Feb 2023-Mar 2026 | Sweden

- Shaped architecture and production readiness for AI/ML and GenAI across network, service, supply, sales, finance, developer, knowledge, and product-facing workflows.
- Connected data/model choices with integration, explainability, monitoring, operating ownership, and user adoption rather than treating productionization as deployment alone.
- Influenced multi-team technical roadmaps and executive decisions; presented AI strategy and value at Senior VP level without claiming formal enterprise strategy ownership.

Lead Decision Scientist / Data Scientist | Global telecommunications technology organization

Jun 2019-Feb 2023 | India / Global

- Built and led production prediction, forecasting, classification, and decision-support solutions across network, service, supply, sales, and finance contexts.
- Delivered capabilities used by 200+ people across geographies; presented applied ML work externally and received internal innovation recognition.

Assistant Consultant / IT Analyst | Tata Consultancy Services

Mar 2013-May 2019 | India / Belgium

- Enterprise technology consulting and analytics transformation in global client environments.

Application Developer / System Engineer | IBM India

Aug 2008-Mar 2013 | India / Spain

- Enterprise integration and TIBCO middleware engineering in telecommunications environments.

PUBLIC PROJECTS

- **Enterprise AI Architecture**: Executable decision canvas and readiness gate.
- **Trustworthy Agentic AI**: Policy-gated runtime for bounded autonomy.
- **Semantic Context Demo**: Explainable graph-augmented retrieval and evaluation.
- **Autonomous Network RCA**: Topology-aware, evidence-scored root-cause analysis with self-validation and human-controlled remediation.

SELECTED EVIDENCE

- **Operational early warning**: approximately ten minutes of useful lead time before network degradation; production use and internal innovation recognition.
- **Technical leadership**: guides four engineers; matrix/project scope up to 15; 20+ hiring interviews and participation in performance, promotion, and resource planning; no direct reports.
- **International delivery**: Sweden, India, Belgium, and Spain, with global stakeholder and user groups.

EDUCATION

B.E. | Sant Gadge Baba Amravati University, India | 2004-2008
